EDUCATION

University of Massachusetts, Amherst

Amherst, MA

Computer Engineering (BS), Mathematics (BS)

Sept. 2023 - May 2027

• **GPA**: 3.9/4.0

• Dean's List: Fall 2023 – Present

- Computer Engineering Coursework: Data Structures, Hardware Organization, Computer Networks, Embedded Systems, Signal Processing, Artificial Intelligence, VLSI, Systems Programming, Hardware Design for Machine Learning
- Mathematics Coursework: Statistics, Linear Algebra (Graduate), Discrete Math, Multivariate Calculus, Mathematical Modeling

EXPERIENCE

Vice-Chair, Dean's Advisory Board

Sept 2024 – Present

Amherst, MA

College of Engineering

- Co-led monthly meetings with the Dean to develop and implement initiatives that fostered a stronger sense of community within the College of Engineering.
- Proposed and organized signature events, including an Engineering Formal, pitch competitions, and developing
 a community hub website to connect students and promote involvement.

Private Tutor

June 2024 – Aug 2024

MindFlex Education Singapore

- Provided one-on-one tutoring in Calculus, Physics, Biology, and English to high school and college students.
- Customized lesson plans to meet individual student needs, and improved students' average grades from C- to B in 6 weeks.

Landscape Optimization Intern

May 2025 – Aug 2025

Private Client | On-Site (Backyard-Based)

Amherst, MA

- Applied geometric pruning algorithms to optimize shrub curvature, achieving consistent spherical symmetry across hedge clusters.
- Delivered full-stack pool sanitation services, including manual scrubbing, vacuuming, and algae mitigation, to ensure continuous availability of aquatic resources.

PROJECTS

LC-3 Virtual Machine | C, Assembly, Systems Programming

June 2025 – July 2025

- Implemented a virtual machine for the LC-3 architecture from scratch in C, including instruction decoding, memory management, register simulation, and I/O trap handling.
- Built an **interactive debugger** with support for step execution, breakpoints, and real-time memory inspection
- Developed a custom assembler to convert LC-3 assembly code into executable machine code.

Network Traffic Anomaly Detection | Python, Machine Learning, Networks

Aug 2024 – July 2025

- Developed and compared **supervised** and **unsupervised models** to detect anomalies in network traffic using the CICIDS2017 dataset
- Achieved 96.7% AUC with XGBoost through feature engineering and time-series analysis.
- Visualized model performance using ROC curves, confusion matrices, and t-SNE clustering.

Monte Carlo Option Pricing on FPGA | Finance, Verilog, Hardware Acceleration

July 2025 – Aug 2025

- Implemented a Monte Carlo simulation for European option pricing using **Geometric Brownian Motion** in **SystemVerilog** on a Xilinx Spartan-7 FPGA.
- Meshed principles of stochastic modeling, pipelining, and parallel programming to optimize random number generation and maximize throughput.
- Wrote statistical convergence checks to ensure accuracy of pricing under varying volatility and drift conditions.

TECHNICAL SKILLS

Languages: Java, Python, C/C++, PostgreSQL, JavaScript, HTML/CSS, MATLAB

Frameworks: React.js, Node.js, MongoDB, Git, Excel, CUDA, AWS, PyTorch, FastAPI, Valgrind

Hardware: FPGA Design, ARM Assembly, SystemVerilog, Linux
